Office Action Summary

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-3 and 8-10, drawn to detecting mutations in amino acids at positions 10, 45, 46, 54, 64, 82, 84, and 90, classified in Class 435, subclass 23.

II. Claims 4, 5, and 11-13, drawn to detecting mutations in a nucleotide sequence, classified in Class 435, subclass 6.

III. Claim 6, drawn to sequencing protease protein, classified in Class 435, subclass 23.

IV. Claims 7 and 14, drawn to nucleic acid probes, classified in Class 536, subclass 24.32.

Applicant is further required to elect the specific mutation to be examined. If there is overlap with an allowable sequence, rejoinder may be possible.

The inventions are distinct, each from the other because of the following reasons:

The invention of Groups I and II are different from each other because they are measuring a protein sequence vs. a nucleic acid sequence, respectively. Therefore, the starting materials, reagents, and method step are different. These methods are different from the method of Group III which requires sequencing a protein. The nucleic acid sequences of Group IV can be used as

primers and to encode HIV-2 protease which is distinct from the claimed methods which use nucleic acid sequences as probes.

Because these inventions are distinct for the reasons given above and have acquired separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
